

There is legal help. Reaching it **no way.**

- ▶ LexHub is a mobile platform that allows a citizen to go from understanding their problem to a lawyer who solves it in one flow.

AI analysis adapted to Uzbek legislation · verified lawyers · 45-minute consultation

LexHub

Legal aid access layer

The law is clear. But there is no help.

► From citizens facing legal problems

8.6%

Only a small portion of the population reaches legal aid.
The main obstacle is cost.

FACT UNDP 2025

► *A citizen loses not money, but rights: the deadline passes, the contract is signed, and the job does not return.*

34.9%

He says the problem arose "because I didn't understand the law."

14.7%

"I didn't know what to do next," he replied.

32.7 million

Internet user — 89% coverage.
Channel ready.

One flow: from question to answer

A citizen doesn't learn the law — he takes the next step.

► **Result: the citizen knows what to do, does not miss the deadline, and knows who is responsible.**

ChatGPT guesses. LexHub checks.

Four questions — today's solutions and how LexHub answers.

CITIZEN'S QUESTION

TODAY'S SOLUTION

LEXHUB

"Which substance?"
"Is it related to my work?"

General AI does not exist
can you tell me the item number

"When does the deadline expire?"

There is a text of the law - the deadline
uncounted

"Where does my information go?"

Passport, phone, card
goes straight to chat

"What do I do next?"

The user takes the next step.
he must find it himself

- ▶ Each article is a real article of the 8th code.
checked by the limit
- ▶ 30/10/1095 days of expiration
automatically exits
- ▶ Before sending the request
anonymized
- ▶ Application form or certified
lawyer slot

Not an answer — an understandable decision

Each AI response is returned in five blocks in the app.

Low / Medium / High

Forming an application

1 Citizen

Write the problem in your own language — see it even without registering

2 Application

5-block answer + mandatory warning: this is advice, not a judgment

3 Community

The question can be asked anonymously; the lawyer who answers will be verified on the server side

4 Lawyer

A 45-minute slot can be booked — online, by phone or in the office.

Guest mode: can be viewed without registering — the obstacle in the first step has been removed.

Who pays? Citizen. We get 10%.

No subscription, no credit — just a completed consultation.

ONE CONSULTATION

150,000 soums

45 minutes · default price

135,000 soums — to a lawyer

15,000 soums — LexHub (10%)

The commission is calculated on the server side — the client application cannot affect this number.

FACT schema.sql:1329, 1573

Monthly commission scenarios (million soums)

PROJECTION 100 lawyers × 4-16 consultants/month

No capacity limit: one lawyer has 12 slots per day (09:00-18:00 / 45 min.).

There is competition. There is also an empty quadrant.

↑ Legal certainty

WHY CAN'T IT BE EASILY REMOVED?

▶ Legal guardrail — at the code level

Item limits, term calculations, PII cleanup, and risk assessment are built into the product. They cannot be added on top of the chatbot.

▶ Trust is enforced on the server side

Direct writing to consultation and payment is prohibited with RLS; commission, idempotence, and audit log are in the database.

▶ Certified lawyer — not from the client

The expert badge is issued via a trigger, the license number is unique. You can't say "I'm a lawyer" from the app.

▶ Localization and community turnover

Question-and-answer corpus in Uzbek, bilingual, direct links to government services.

There is no traction. The MVP is built.

Let's be clear: 0 users, 0 revenue, payment rails not connected.

NOW

MVP works

Community Q&A, AI analysis, government services guide, and consultation booking flow are ready.

3 MONTHS

Payment and housing

Payme or Click integration, payout execution, cloud legal corpus, and real vector search.

6 MONTHS

Pilot

20–30 verified lawyers, first-time paid consultations, rating and review system.

12 MONTHS

B2B2C

Legal support channel for banking, insurance and HR; document automation.

AXION — the team that built the product

Each role is tied to a specific need at LexHub.

Uktam Pirimov

Product Manager / Mobile Developer

Product vision, Flutter, Supabase, architecture, AI integration

Mukhtarov Sarvar

Backend Developer

Backend architecture, API, database, security, business logic

Islamov Kamoliddin

Designer / UI-UX

Design system, two lingual interface and readability easy typography .

Rakhmatullayev Abdulla

ML Engineer

Monetization , unit economics, lawyer onboarding, partnerships, market strategy

Aliqulova Ezoza

Tester

Legal content, legal terminology, understanding user needs, legal workflow

Open gap: There are no licensed lawyers on the team. Therefore, legal correctness is built into the code; in the pilot, 2–3 certified lawyers will be domain consultants.

Today, out of every 100 citizens
9 of them reach the lawyer.
We will build a road for the remaining 91.

FACT UNDP 2025 — 8.6% ≈ 9/100

- ▶ LexHub is not just another legal chatbot. It is a trusted interface layer between the citizen and the legal system.

LexHub • AXION Team • Pitch Day 2026

Next 3 months: payment is connected, legal corpus is uploaded, pilot begins.

OUR REQUEST

- ▶ **Pitch Day winner**

and LegalTech in compliance mentorship

- ▶ **2-3 verified lawyers**

for a pilot — introduction to the legal profession
